I purchased a XM radio for my truck. You see, I'm a truckdriver and drive through many states where I can't get any radio stations. I drive the southwestern parts of America and what little radio I can get is Mexican music with Mexican speaking DJ's.

That's not entertainment since I understand English only and like music that I know and enjoy. No radio, the drive, my job was very boring. Most manufactures and factories has music piped in to their employees. Well, the XM radio does the same for me on my job. I know many drivers who now use less of their CB's because they enjoy the entertainment from the XM radio. Also, the instant traffic report is a major function for a driving job, it informs us the hyway situations and helps us maintain a better driving experience through a major city. The weather report is also a major function for our job. We do drive high profile trucks and knowing ahead the weather conditions helps us to be alert to the weather conditons in case we need to pull over. How many times have you seen a film of a city or town dystoryed by a tornado and trucks laying over its side. Not a pretty picture. Through the use of a XM radio, we can be alerted of serious weather conditons and in case of an emergency, we can take cover out of our trucks. Thank you keep the XM radio going. It's part of my and other job.
